

ECOrx in Nursing Home Facilities

Ergonomic resilient flooring for easy mobility and superior fall support

The tested stability and unparalleled ergonomic support of ECOrx surfacing make it an ideal option for nursing home environments. ECOrx's factory laminated wear layer and underlayment are manufactured for comfort, providing the optimum level of cushioned support with the resiliency of a recycled rubber surfacing system. Whether installed in a recreation area, hallway, or community area, ECOrx ensures a safe and beautiful environment for residents, employees, and guests.

For nursing home applications, nothing is more important than the health and safety of the residents. ECOrx plays an important preventative and pro-active role in ensuring that both of these qualities are maintained. The factory laminated material has undergone head injury criterion tests to clarify the support levels that it provides in the event of falls or other impacts. With a passing result that exceeds even the support provided by carpet tile, ECOrx

- Resilient hard surface wear layer with thick underlayment support
- Factory laminated for easy installation
- Superior slip resistance
- A color palette of 65 standard patterns
- Easy maintenance - sweep, dry mop, or vacuum
- Custom design and color capabilities
- Long wear life

is a proven leader in cushioned safety. In addition to these injury reduction properties, ECOrx also features a resilient top surface conducive to the mobility of elderly residents. Whether it's the rolling of a walker or a resident's difficulty lifting their feet, ECOrx makes traveling less hazardous.

ECORx

A healthy design choice

Because residents are exposed to the internal atmosphere of their building for a prolonged period of time, minimal VOC emitting resources are a crucial life-enhancing investment. While many materials release these harmful compounds that create and intensify health concerns for residents, ECORx adheres to rigid standards as a low-emitting solution, is FloorScore certified, and can potentially contribute to LEED points.

The health and safety considerations of ECORx surfacing make it an advantageous investment for the long-term health of residents and the energetic ambiance that the color patterns can create are sure to lift the spirits of both residents and guests. With versatile options that include custom-cut designs and colors, nearly any design ambition can be fully integrated into the building's presentation. A fusion of practical necessity and versatile design, ECORx delivers a safe, warm, and homey environment to nursing home applications.

The factory preparation of ECORx includes the application of ECOguard, a proprietary water-based polymeric maintenance coating that is applied on-site at ECORE International. The addition of ECOguard to ECORx surfacing products eliminates the need for initial on-site sealant and protects the floor from dirt and scuffs, significantly reducing initial and long-term maintenance costs.
