Carbondale Recreation Center, Carbondale, CO

Recreation Facility Design and Product Needs:

- Durable flooring to provide comfort and sustainability under heavy activity
- Functional versatility to accommodate a large variety of unique applications such as rock climbing wall surrounds and several fitness rooms
- Composition to ensure compliance with the organizational promotion of quality life
- An extensive array of color options to achieve correlating design themes throughout the center
- Environmentally supportive characteristics to assist in the acquisition of Leadership in Energy and Environmental Design (LEED) points

ECOsurfaces' Delivering Characteristics:

- Design and functional specifications accomplished by means of highly durable ECOsurfaces commercial flooring in black, tan and orange hues
- Contribution of LEED points towards Leadership in Energy and Environmental Design accreditation
- Floor Score Certification, earned by compliance with rigorous indoor air quality emission requirements
- High recycled content and low VOC emissions

The Parks and Recreation Department of Carbondale, Colorado is committed to developing “leisure services, programs and facilities that improve the quality of life for all citizens, and benefit the economy of our community.” To accomplish this goal, the Department has established a recreation center complete with general fitness facilities, Play Care options and a rock climbing wall. In an effort to establish a functional and durable surface for these activities, the Carbondale Recreation Center installed ECOsurfaces Commercial Flooring. They have even recently ordered additional square footage for some upcoming facility expansions.

ECOsurfaces provided the Carbondale Recreation Center with highly durable and functionally versatile flooring. The selected color combination of tan, orange and black enhanced the professional appearance of the facility. Similarly, the choice of black ECONights flooring in the fitness room contributed as an accent to the red rock climbing wall, a notable feature of the facility. Additionally, ECOsurfaces equipped the center with environmentally sensitive flooring. Not only does the composition of ECOsurfaces Commercial Flooring consist of recycled post-consumer tire rubber and EPDM made of post industrial waste and organic fillers, but it has been proven to possess low VOC emissions and has been Floor Score certified to adhere to rigid indoor air quality emissions standards.

The ECOsurfaces flooring installed at the Carbondale Recreation Center contributed toward LEED (Leadership in Energy and Environmental Design) points. These quality of life supporting characteristics, merged with the durability, design and functional ease of ECOsurfaces Commercial Flooring, made it an ideal option for Carbondale Recreation Center. The center was able to develop visual appeal while holding true to their commitment to enhance the quality of life for their visitors.
