Veterinary Orthopedic Sports Medicine Group,
Annapolis Junction, Maryland

Veterinary Clinic Design and Product Needs:

- Stringent adherence to health standards promoting the recovery and well-being of veterinary patients
- Functional versatility for use in lobby areas, specialized patient care rooms, and a canine rehabilitation gym
- Extensive color options for the creation of a unified appearance across diversified surfacing applications
- Environmentally supportive characteristics to assist in the acquisition of Leadership in Energy and Environmental Design (LEED) points

ECOsurfaces' Delivering Characteristics:

- FloorScore certified surfacing for low volatile organic compound (VOC) emissions
- Highly versatile composition for effective use in many diverse applications
- A Color palette of 83 standard patterns and unlimited custom patterns
- The potential to assist in contributing up to 9 points toward Leadership in Energy and Environmental Design (LEED) certification

The Veterinary Orthopedic Sports Medicine group is an organization committed to “providing a standard of care and service in veterinary orthopedic sports medicine and rehabilitation that rivals and surpasses what is available to humans.” With the construction of their new orthopedic sports medicine and rehabilitation center in Annapolis Junction, Maryland, the VOSM group was in pursuit of design that would provide practical support for the unique health needs of each visiting animal and distinguish them as a technologically and medically advanced veterinary facility. The VOSM clinic employs highly developed surgical equipment and advanced medical procedures while seeking to maintain a warm, comfortable, and open environment to make both suffering pets and their owners feel at ease. As a flooring solution for these specialized design objectives, the VOSM clinic chose to install ECOsurfaces Commercial Flooring.

ECOsurfaces delivered durability, versatility, and easy maintenance capabilities to VOSM’s new orthopedic and sports medicine facility. The resilient characteristics of ECOsurfaces’ recycled surfacing made it ideal to withstand the inevitable scratch and wear marks incurred from visiting pets. Of further appeal was ECOsurfaces’ versatile composition, enabling it to be used effectively in many applications including a rehabilitation gym and a professional interior lobby. As an organization consistently interacting with animals, VOSM also found the easy maintenance properties of ECOsurfaces to allow for more consistent visual appeal and reduced preservation time and costs. In addition, ECOsurfaces’ palette of 83 standard color patterns enabled coordinated design across the facility’s diverse applications. With the contribution of ECOsurfaces, VOSM was able to create a stunning and practical orthopedic sports medicine and rehabilitation center that comforts pets and owners with a warm environment and provides them with state-of-the-art veterinary care.
