

Rooftop & Patio **Surfacing**

About Us

ECOsurfaces products are intentionally created for the purpose of enhancing and sustaining the lives of the people who occupy the spaces they go into.

Our tiles are unique because of their Quad Block installation system and cushioned resilience, which are attached to a connector and not to the roof or patio itself. This eliminates costly damage to elastomeric membranes and ensures the quality of the roof remains unaltered.

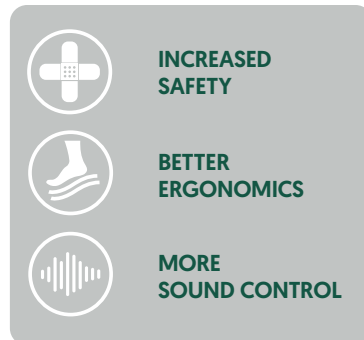

Product Options

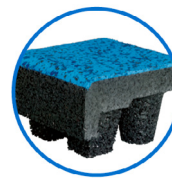

Product Features/Benefits

- ECOsurface's ColorMill® EPDM allows for greater UV fade resistance
- Expansion and contraction with weather conditions to prevent buckling
- Custom color/logo capability
- Water drainage to avoid ponding
- Durability
- Slip Resistance
- Easily removed or replaced
- Lighter than stone pavers
- ECOguard for added protection
