

CASE STUDY

St. Cloud Public Library

St. Cloud, MN

Products Installed

- ECOsurfaces — 118,000 SF

Project Needs

- Color Choices
- Sustainable
- Durable

Product Benefits

- Ergonomic
- Easy to Clean
- Low Maintenance

ECOsurfaces Enhances Local Library in Minnesota

About the Project

The St. Cloud Public Library, a branch of the Great River Regional Library, is home to more than 83,000-square-feet of ECOsurfaces flooring. As a community based organization, the St. Cloud Library seeks to attract patrons through its extensive resource availability, superior customer service, and drive for educational enhancement. The design team for the library also maintains an architectural goal of implementing sustainable resources into their building projects, delivering further benefit to the community through proactive environmental initiatives. ECOsurfaces, which is composed of composition rubber, was the solution of choice for St. Cloud's environmental and design needs. With a color palette of more than 75 colors and limitless custom options, the St. Cloud design team was not lacking in color selections for their 118,00-square-foot project.

While lending extensive color options to enhance the design of the St. Cloud facility, ECOsurfaces also enabled the creation of unique surface shapes through the use of precision water-jet cutting technology. This technology was used to produce the stepping stone patterns in the playful children's area.

Additionally, ECOsurfaces' inherent sound-dampening characteristics ensured that the St. Cloud Public Library remains a facility conducive to unhindered educational and community investment.
